

Smart Tank is a digital tool created to easily monitor the stock levels of your tanks remotely

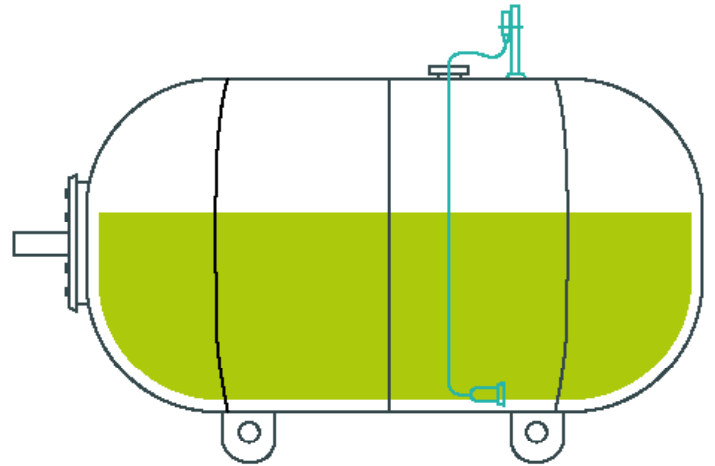

Smart Tank is designed to **optimize your operational performance**

Boost your business performance and reduce costs

The answer to your expectations:

- > **Add value to your operations** by remotely monitoring your stock efficiently
- > **Guarantee product availability** at your sites by optimizing the fill rate and TotalEnergies deliveries
- > A user-friendly web portal to **access, view, analyze and export** of your tank-level data

This solution allows you to:

-  > **Reduce logistics costs and optimize your operational performance** by digitalizing your activities
-  > **Manage and anticipate stock refueling** thanks to the stock level alerts

How does Smart Tank work?

1

A sensor to measure your tank's level for:

- > Liquid products: fuel, diesel, lubricants, AdBlue®, wasted oil, etc.
- > Gas products: LPG, propane, butane, etc.

2

A range-finding unit to send the data on different communication protocols to ensure connections all over the world

3

A user-friendly web portal to easily access, view, analyze and export your tank-level data

This solution by TotalEnergies gives you **value added services thanks to the IoT technology**

Key information sent:

- > **Volume** and **percentage level** of product left in the tank
- > **Estimated autonomy** before refueling
- > **Alerts configuration for low and high levels** of product in the tank

Customer Testimonial

“ Smart Tank is the solution that saves me time and gives me peace of mind. A TotalEnergies sales representative always contacts me at the right time for optimal replenishment. ”

Fleet Manager in South Africa

4

Easy-to-read **graphics & mapping** with responsive access on smartphones and tablet browsers

5

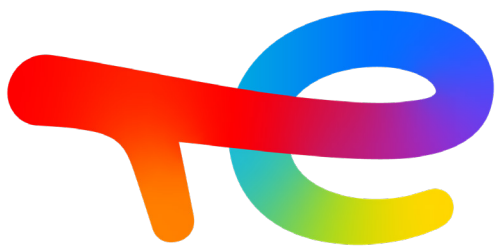

Low- and high-level **alert settings**

6

Unit battery with a long-life (around 8 years)
